E-PIC: ClinicalKey Usage Reports Guide

The Elsevier Product Insights for Customers (E-PIC) portal allows customers to gather their own ClinicalKey usage reports. These instructions outline best practices for generating reports that provide a comprehensive view into your organization’s content usage.

ELSEVIER

Advancing human progress together

Report Name	Where to access	Features
COUNTER Reports	E-PIC To learn more, please visit our guide here.	• Total Item Requests = Views + Downloads • Unique Item Requests = Number of unique chapters/articles that had views and downloads (this metric is new with COUNTER5 and not in any other reporting) • Uses COUNTER5 data
ClinicalKey Usage Reports	E-PIC	• Includes Views and Downloads but also additional activities like Prints, Saved Content, Presentation Maker, and Email. • Uses COUNTER5 data
R16 Reports	Being replaced with usage reports on E-PIC and the last R16 reports will be emailed out in April 2026.	• The Top 20 Content Publications section shows just Views • The list of journals and books at the bottom of the report shows Full Text Views (Views + Downloads) • Uses COUNTER4 data

How do you access E-PIC?

Visit https://e-pic.elsevier.com/ and click *Sign In*.

Via Email:

1. Sign in on the Welcome page and type in your email address. Click *Continue*.
    - If you have not previously registered this email address on an Elsevier product, you will be taken to the registration page **(Fig. 2).**
2. If you have a password, enter it on the next screen or click *Sign in with a one-time link* **(Fig. 3).**
3. An email will be sent to you with the link to sign in.

How do you access E-PIC? (Cont.)

Sign in via your institution:

1. Type your organization's name in the search field **(Fig. 4).** A list of institutions will begin populating on the right, and you may choose your institution here. This link will take you to your institution's login page.

2. Once logged in via federated access or email address and password, you will be directed to E-PIC's homepage.

3. From the E-PIC dashboard tab, click "ClinicalKey Usage" **(Fig. 5).**

Note: This includes both ClinicalKey and ClinicalKey for Nursing usage and if your institution has purchased both, they will be visible as separate tabs.

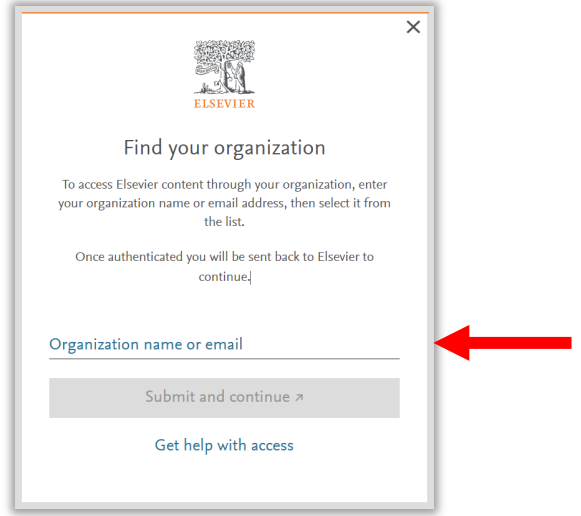

Figure 4. Find your institution. *Arrow,* Institutional email or name field.

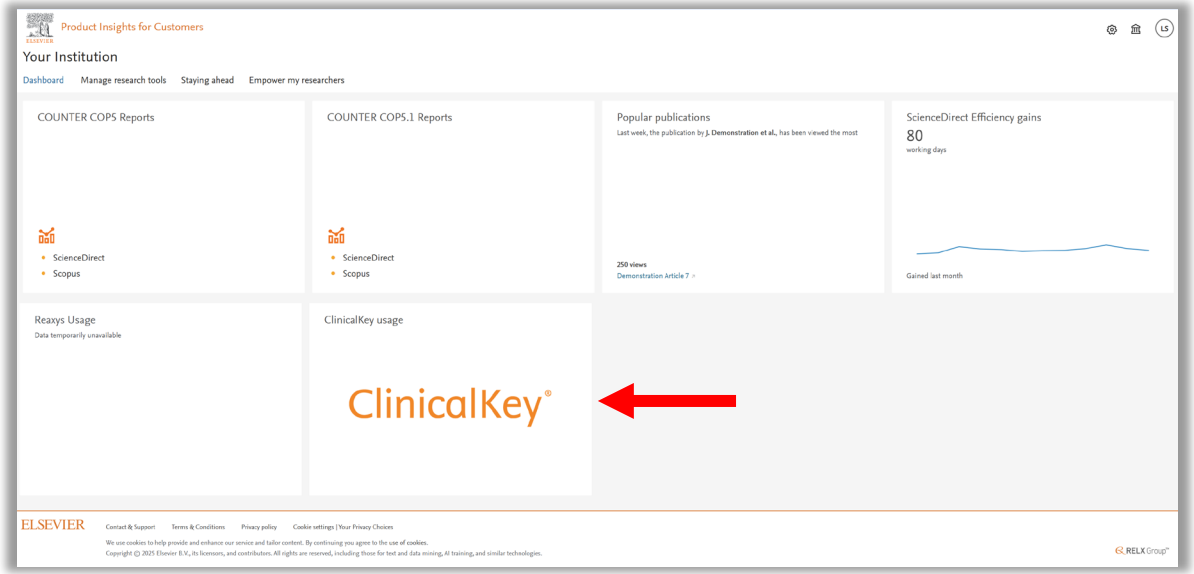

Figure 5. E-PIC dashboard. *Arrow,* ClinicalKey Usage widget.

For more information on other E-PIC topics, visit the Support Hub.

Glossary of Terms

Metrics:

Deep Knowledge: Content included under "Deepen your specialty and medical knowledge": Books, Journals, Medline, Multimedia.

Point of Care: Content included under "Diagnose and treat your patients with confidence": Clinical Overviews, Drug Monographs, Calculators, Guidelines, Patient Education, Drug Class Overviews, Procedure Videos. For ClinicalKey for Nursing: Nursing Content Sets, CPM Guidelines.

Content Usage: Usage events that are related to the consuming of content; currently comprised of "Content Views," "PDF Downloads", "Content Prints", "Saved Content", "Presentation Maker", and "Email Content".

Session: The period of time a user performs at least one content usage activity on the platform. By default, if a user is inactive for up to 60mins or more, or the user deletes the session cookie, future activity is attributed to a new session. Users that leave the platform and return within 60mins are counted as part of the original session.

(Continued)

Glossary of Terms (Cont.)

Metrics (Cont.):

Specialties: This accounts for the number of specialties accessed in a month through ClinicalKey compared to the same month in the previous year. Content may be tagged with one or more specialties. When content is tagged with multiple specialties it is counted as its own specialty. For example, if a journal article is tagged with both “Cardiology” and “Internal Medicine,” this will be counted as a unique specialty event and not two separate specialty events. This approach ensures that the view reflects the full breadth of content relevant to its domain including multiple specialty attributes to one piece of content.

User Types:

Active Registered User: A registered user who performs any activity on the platform over a certain time period.

Anonymous User: A user who performs any activity on the platform without being registered.

Discovering usage

NEW: Select and view usage reports **(Fig. 7)** for any month within the last **12 months,** to review trends, compare activity over time, and access historical usage information.

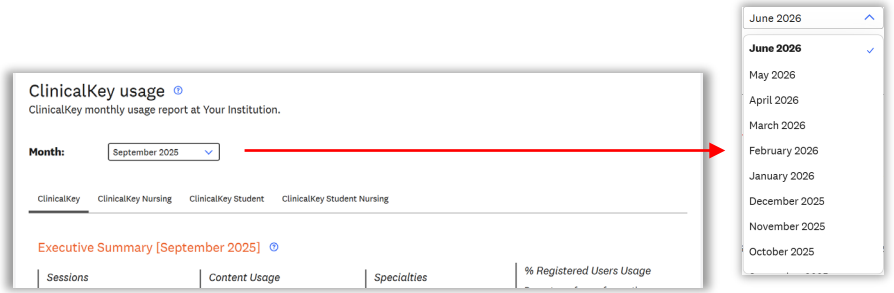

Figure 7. Reporting period. *Arrow,* drop-down menu of available reporting periods.

Executive Summary:

High level overview of the most used ClinicalKey data points for the most recent month **(Fig. 8).**

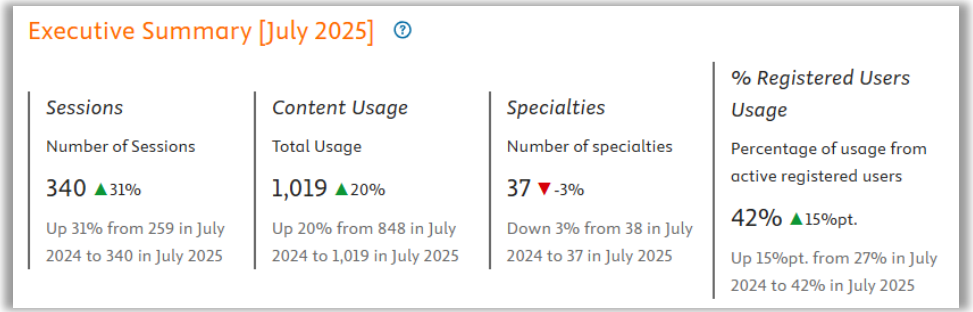

Figure 8. Executive Summary.

Account Summary:

Provides a month by month update of users that can be filtered by specialty **(Fig. 9).**

Available filters:

- Content usage
- Number of sessions
- Number of specialties used
- All users
- Active registered users
- Anonymous users

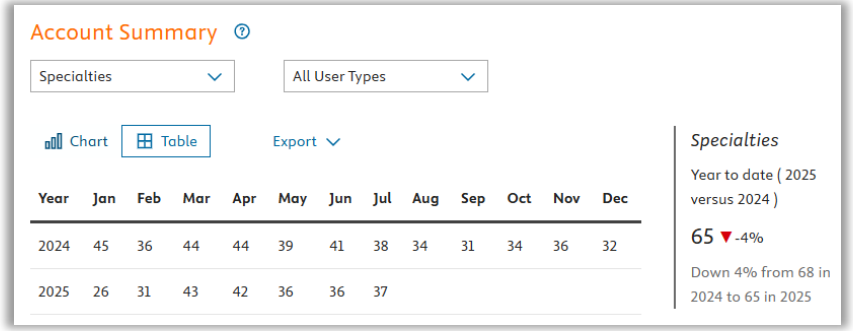

Figure 9. Account Summary table filtered to number of specialties used and all user types.

Discovering usage (cont.)

Content Usage:

Accounts for all content related events tracked in ClinicalKey. This data shows how much the content of the platform have been interacted upon and provides breakdowns by content types **(Fig. 10)** and use cases with comparisons to past periods **(Fig. 11).**

Usage can be breakdown by: Deep Knowledge versus POC (2 categories) or Content Type.

To view and compare content types, deselect the content type below the chart that you do not want included by clicking the name of the content below the graph.

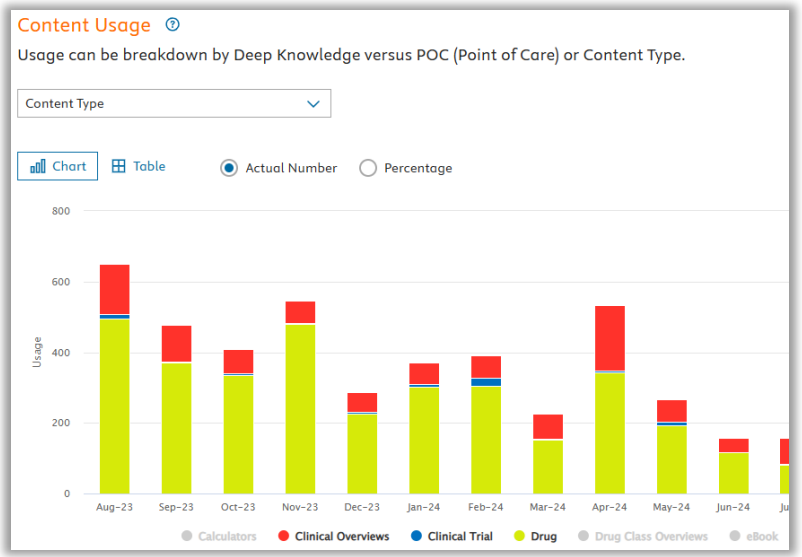

Figure 10. Content usage report in table format. Chart is comparing *Clinical Overviews, Clinical Trial and Drug* content types.

Year to date usage growth per content type

Content Type	Previous Year to date	Year to date	Difference over prior YTD
Calculators	16	28	75%
Clinical Overviews	559	345	-38%
Clinical Trial	53	26	-51%
Drug	1490	1319	-11%
Drug Class Overviews	3	15	400%
eBook	3995	2579	-35%
Guidelines Summary	37	13	-65%
Journal	2317	1434	-38%

Discovering usage (cont.)

Top Journal Articles:

Content usage accounts for all content related events tracked in ClinicalKey. This data shows the most used journal articles. **(Fig. 12).**

Top Journal Articles [July 2025]

Content Journal usage accounts for all content related events tracked in ClinicalKey. This data shows the 10 most used journal articles.

Article	Title	Usage
Corrigendum to "A Case Series of Severe Mycobacterium Fortuitum Infections from a Single Ambulatory Surgery Center" [Arthroplasty Today 30 (2024) 101520]	Arthroplasty Today	4
Lung cancer and hormone replacement therapy	The Lancet	4
Chronic Kidney Disease in Diabetes: A Clinical Practice Guideline	Canadian Journal of Diabetes	4

Figure 12. Top Journal Articles.

Top Journals and Books:

This data shows how much the content of the platform have been interacted upon and provides breakdowns by journals and books. Select combined, book, or journal **(Fig. 13).**

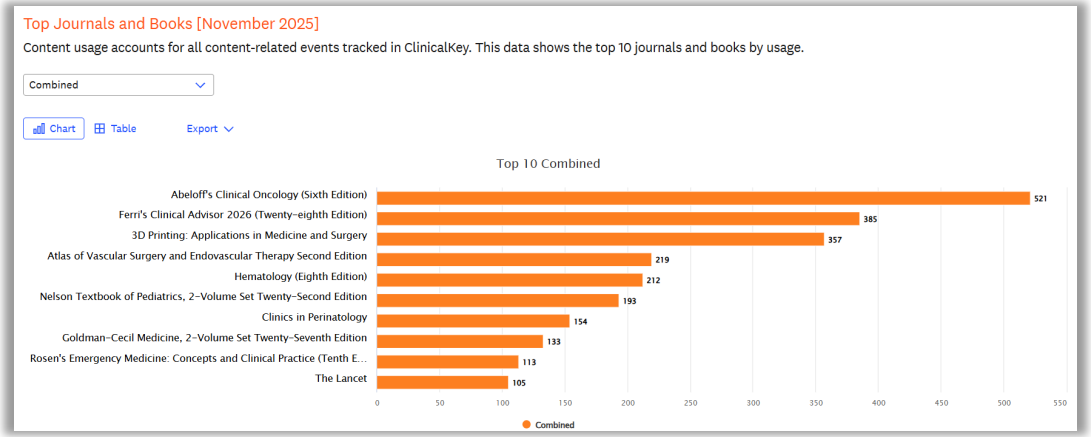

Figure 13. Top journals and books report in chart format.

Discovering usage (cont.)

Top Clinical Overviews and Drug Monographs:

This dataset identifies the top 10 items by usage, spanning clinical overviews and drug monographs **(Fig. 14).**

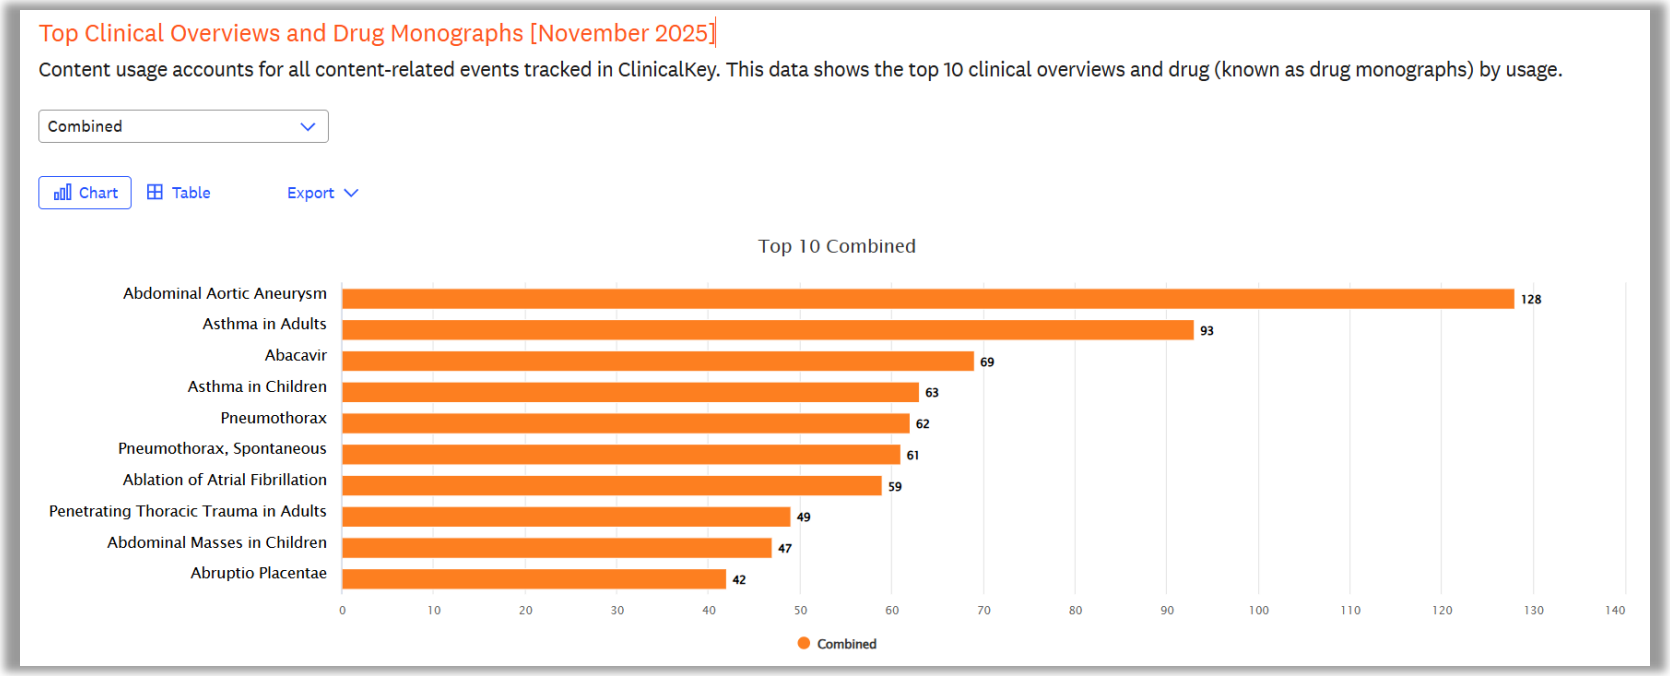

Figure 14. Top Clinical Overviews and Drug Monographs, combined.

Discovering usage (cont.)

Specialties:

This data shows the most used specialties for each content type, where available, broken down by Deep Knowledge and Point of Care content. This also provides insight into the account's usage compared to global usage **(Fig. 15).**

To narrow your focus to your account's usage, deselect *Global* on the legend below the bar graph. This will remove *Global* usage from your view of the specialties usage.

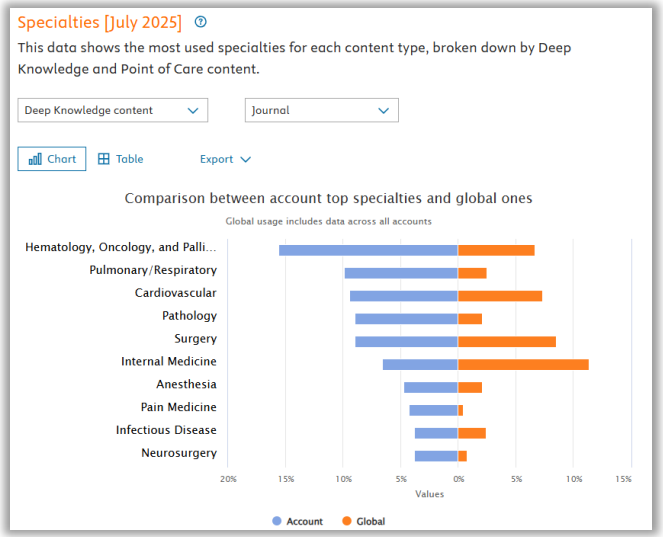

Figure 15. Specialties report filtered by journals [Deep Knowledge content].

Active Registered Users:

These graphs display the number of users who have created and are logged into their personal accounts and the share of content usage or sessions they account for, compared with anonymous (unregistered) users **(Fig. 16).**

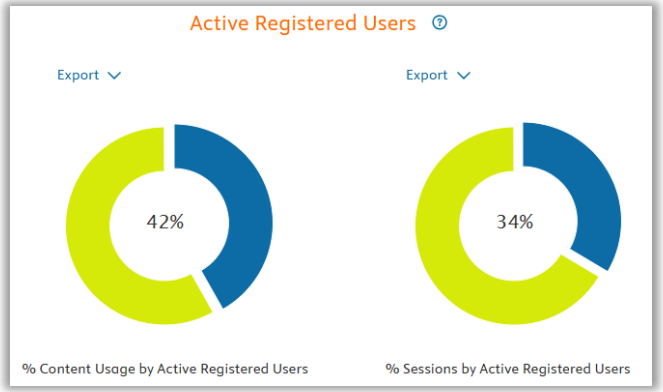

Figure 16. Active Registered Users data. *Left,* percent content usage by active registered users. *Right,* percent sessions by active registered users.

Discovering usage (cont.)

Usage of Active Registered Users broken down by feature used:

This view shows usage of active registered users and provides a break down by key features that are available to them. **(Fig. 17).**

To view and compare content types, deselect the content type below the chart that you do not want included.

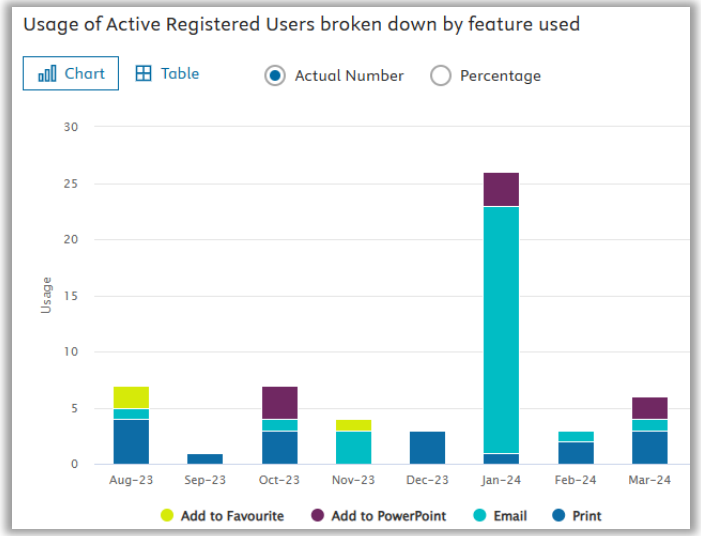

Figure 17. Usage of Active Registered Users report in chart format.

Activity Year to Date comparison between current and previous year:

This is displaying year to date usage of key features available to active registered users, comparing to the previous year to date.**(Fig. 18).**

Activity	Previous Year to date	Year to date	Difference over prior YTD
Add to Favourite	2	5	150%
Add to PowerPoint	5	0	-100%
Email	35	26	-26%
Print	18	12	-33%

Figure 18. Chart showing year to date comparison to previous year.

Discovering usage for consortium accounts

View usage for all child accounts in your consortium:

The default selection for the child account menu is *View all child accounts* **(Fig. 19).** When this is selected, the usage reports on this page are calculating the usage of the consortium as a whole.

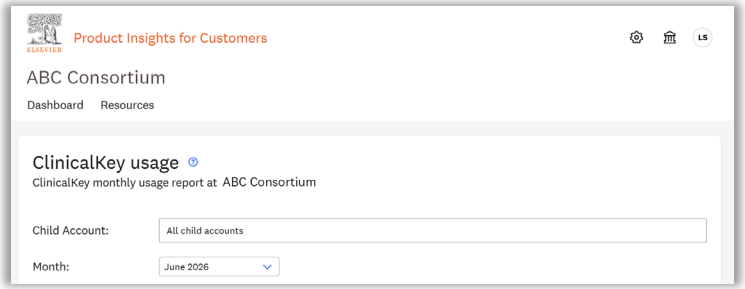

Figure 19. Consortium usage for ClinicalKey.
Arrow, View all child accounts.

View usage for two or more child accounts in your consortium:

Consortium administrators may also select two or more child accounts and view the combined usage in a single report.

View usage for individual child accounts in your consortium:

Select a child account from the dropdown menu **(Fig. 20).** When a child account is selected, the usage reports on this page are selectively calculating the usage of the child account.

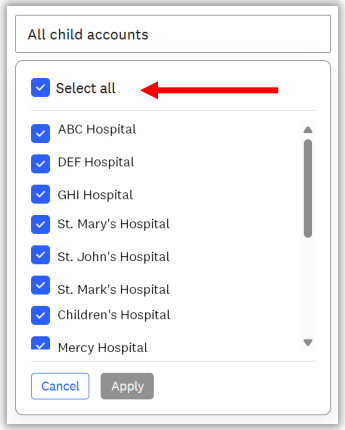

Figure 20. Child account usage for ClinicalKey.
Arrow, Select all.

Discovering usage for consortium accounts (cont.)

Usage breakdown per child account:

View usage by content, session count, number of specialties and active registered users for top 20 child accounts in your consortium **(Fig. 21):**

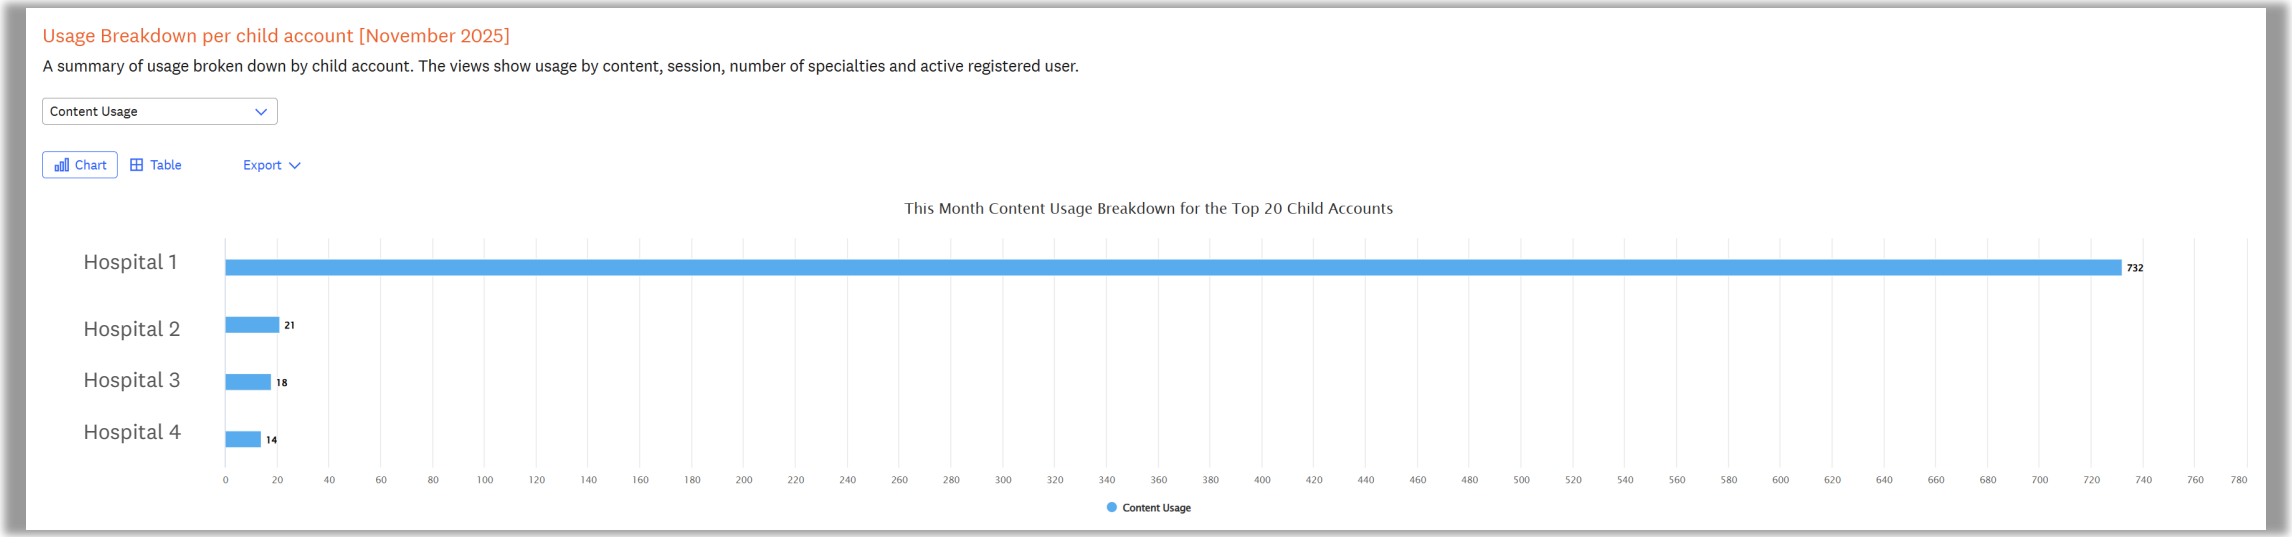

Figure 21. Child account usage for ClinicalKey. Content usage report displayed here.
