Setting Up Conversation Sharing in ClinicalKey Nursing AI

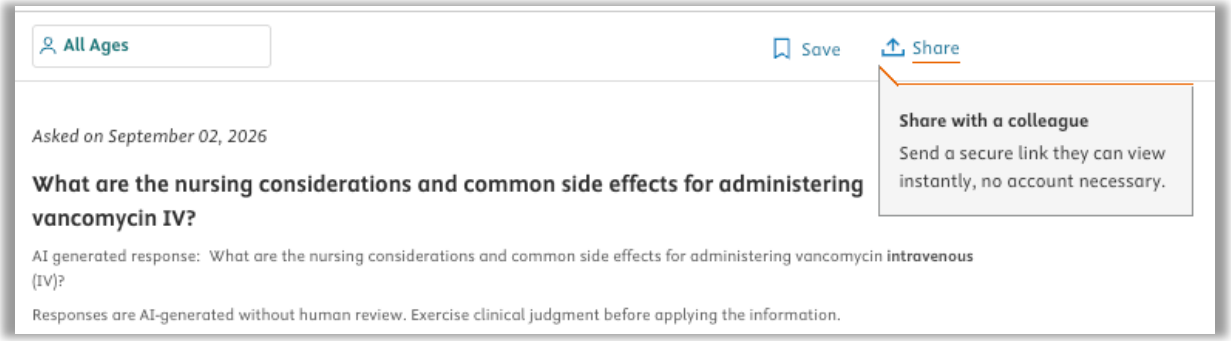

Overview

ClinicalKey Nursing AI supports **Conversation Sharing**, an institutional feature that allows users to share a secure, read-only link to a ClinicalKey Nursing AI conversation with another medical professional.

Conversation Sharing is enabled at the institutional level by default.

Benefits

- Enable collaboration between medical professionals
- Maintain institutional sharing access and licensing controls

Sharing a Conversation

- Users are reminded not to share protected health information (PHI) when generating a shared link.

Recipient Access Experience

- A preview of the shared question is displayed to the recipient, along with a modal window requiring acceptance of the applicable terms and conditions before proceeding.
- Recipients who are ClinicalKey Nursing AI customers with an active CK AI license must sign in to their ClinicalKey Nursing AI account to access the full answer.
- Recipients without ClinicalKey Nursing AI access can view a limited preview of the shared question and answer and are guided through a streamlined registration workflow to start a free trial or request an institutional demo to access the full answer.

Verification

After initial access to ClinicalKey Nursing AI is complete, administrators or designated users may verify enablement by confirming that the **Share** option appears within ClinicalKey Nursing AI conversations for eligible users.

How to Opt Out of Conversation Sharing

1. Submit a Support Request
Visit the **ClinicalKey Nursing AI Support Center** and submit a ticket to disable Conversation Sharing for your institution.

2. Configuration and Enablement
Once your request is received, the ClinicalKey Nursing AI Support team will deactivate Conversation Sharing for your institution. When complete, users will no longer see a **Share** option within ClinicalKey Nursing AI conversations.

Need Help?

For assistance with Conversation Sharing, please submit a request through the **ClinicalKey Nursing AI Support Center**.
